**What is a Science Café?**

For the price of a cup of coffee or a glass of wine, anyone can come to explore the latest ideas in science and technology. Meetings take place in cafes, bars, restaurants and even theatres, but always outside a traditional academic context. One branch of this trend began in Great Britain and is called Cafe Scientifique. ‘Blue Mountain’ has joined this worldwide network in its attempt to advance science, to move discussion into the public arena – academics going to the public, not the public going to academics. Science Cafés have no brief to defend science at all cost. People are therefore welcomed to debate and ask awkward questions in a face-to-face contact with scientists at a community level in a ‘bottom up’ non-organizational manner.

The Café Scientifique Network does not have a narrow purpose, be it political, educational or scientific, rather it is helping bring science back in culture. A typical evening is spent in a cultural examination of science, from which each member of the audience draws their own conclusion and from which such discussion are an end in itself.

The previous sessions, involved Dr. Ben Jensen on the Cervical Cancer Vaccine, Dr. Roy Burns on Modern Zoos and Species Preservation, Dr. Lee Dugatkin on Altruism, Dr. Robert Esterhay on Electronic Medical records and Health Information Exchange and Dr. Paul Cappiello on the evolution of natural and planned ecosystems.

**These are discussion and dialogue centered events that we hope to facilitate at least once per month. We are actively seeking sponsorship and hope that in the not too distant future the top downs will meet with our bottom up approach and see the benefits of science cafes.**
